EXPERIENCE

August 2020 - Current

Application Development Programmer Analyst Citi

- Working in Trade and Treasury solutions for express payment and limit systems for NAM, APAC and EMEA clients.
- Cross functional co-ordination with different teams for payment flow.
- Build RESTful web services that follow industry best practices
- Worked on unit tests and code coverage configuration as well as handled testing and deployment cycles with the required document and confluence creation.

PROJECTS

• Express Payments

Technologies : Spring , Java Programming , Kafka

This project is used to earmark the amount for premium clients. It takes earmarking request from upstream partner , check the available liquidity and sends the request to downstream partner for earmarking.

• Limit Monitoring

Technologies : Spring , Java Programming, Mongoddb, Sql

This project is to maintain a limit with given branch code, payment type and Currency. A limit represents available branch level liquidity. Any incoming and outgoing payments are checked against this liquidity.

OTHER ACTIVITIES

• Participated in Citi wide Hackathon

BlinkKyc - this project provides capability to do kyc of customers which are going to onboard on ONDC platform. This application connects with setu api's to validate all the documents and keeps it in single place for multiple use.

• Citi India fitness challenge

Secured the first position in fitness challenge across Citi.
